EDUCATION

Rajshahi University of Engineering and Technology

Graduated July, 2025

BSc. in Electrical and Computer Engineering

CGPA: 3.73 / 4.00

WES Evaluated CGPA: 3.80 / 4.00

SKILLS

- **Programming Language:** C++, C#, Unity, Python, Android, PHP, HTML, CSS, JavaScript, MySQL, Angular, Node.js, MongoDB, LaTeX, MATLAB
- **Robotics:** Arduino, Microcontroller programming
- **ML tools:** Scikit-learn, TensorFlow, PyTorch, Keras, pandas, numpy

PUBLICATION

A Novel Deep Learning Framework for Gestational Age Estimation from Fetal Brain MRI Data ([Link](#))

December 2025

Sumaiya Khatun, Md. Omaer Faruq Goni, Abdullah Al Bayozid

Published in IEEE ICCIT 2025

An Explainable Self-Supervised Learning Method for Kidney Disease Detection

August 2026

Abdullah Al Bayozid, Md Faysal Ahamed, Sumaiya Khatun, Rukaiya Haque

Submitted in IEEE SPICSON 2026

Attention Enhanced Transfer Learning Approach for Fetal Brain Plane Classification

August 2026

Rukaiya Haque, MD Alvin Sarkar Sakib, Tanzid Ahmed, Abdullah Al Bayozid

Submitted in IEEE SPICSON 2026

EXPERIENCE

AI Engineer — MLOps & Model Evaluation

Feb 2026 – Present

Invigilo AI

- Monitor production AI model outputs, identify failure patterns, and report quality issues to support model reliability
- Assist in model evaluation workflows by validating outputs, documenting recurring errors, and providing structured feedback for improvement.
- Collaborate with team to improve feedback loops, reliability monitoring, and deployed model performance.

Internship at SELISE Digital Platforms

March 2024

Industrial Attachment

- Completed an industry attachment focused on modern software development processes, including agile methodologies, sprint planning, and code versioning practices.
- Gained practical exposure to full-stack development and enterprise-grade web application architecture.
- Strengthened proficiency in Angular, Node.js, and RESTful APIs through collaborative development work.
- Enhanced problem-solving and ability to translate user needs into working features within a fast-paced team environment.

Student Data Analyst (Project-based)

Collaborated with a PhD Researcher at George Mason University

January 2025 - May 2025

- Developed a clean, centralised data ecosystem to support reliable research and transparent policymaking.

- Consolidated multi-source historical Bangladesh data (population, elections, geography, AQI, GDP, forest coverage, unemployment, and law-and-order) into a unified analytical dataset.

PROJECTS

Bluetooth Controlled Robotic Arm Car

March 2023

- Designed and built a robotic arm car controlled via smartphone Bluetooth using Arduino and motor driver modules.
- Enabled real-time directional movement and grip control through a mobile interface using Node.js.

Automatic Robotic Arm Car

October 2023

- Designed and developed an autonomous robotic arm car using Arduino that can record and replay sequences of physical movements without real-time user input.
- Implemented memory-based automation logic to allow the system to learn and repeat task sequences such as object picking and placement.
- Strengthened skills in microcontroller programming, real-time control, and robotics.

Android Car Racing Game

August 2022

- Developed a 3D Android racing game using Unity with dynamic controls, speed physics, and collision detection.
- Integrated mobile-friendly UI elements and optimised performance for smooth gameplay across devices.

Ball Bouncing Android Game

September 2022

- Built an interactive Android game using Unity where the player controls a bouncing ball to avoid obstacles and reach targets.
- Implemented bounce mechanics, gravity effects, and increasing difficulty levels using Unity physics engine.

Ball Rolling Through Obstacle Game

September 2022

- Developed a 3D game using Unity where users guide a rolling ball through challenging obstacles and narrow paths.
- Designed level mechanics and physics-based controls for smooth gameplay using Unity's Rigidbody components.

Teacher's Invoice Generator

June 2023

- Developed a tool for automating teachers' invoices with dynamic forms, real-time calculations, and PDF generator using PHP, JavaScript, CSS and MySQL.

Movie Review and Rating Website

May 2023

- Developed a full-stack movie-review platform with user authentication, review posting, rating functionality, and automated average-rating aggregation using Angular, Node.js, MongoDB, and CSS.

CO-CURRICULAR ACTIVITIES

[Certificate](#)

- National High School Programming Contest, Participation (2015)
- National High School Programming Contest, 1st Prize (2016)
- National High School Programming Contest, Top 10 (2017)
- Josephites Technovation, 3rd Prize in Programming Contest (2017)
- Josephite Math Mania, Assistant Sergeant, Executive Committee (2017)
- Techno Fair, Participation in Innovative Project Showcasing (2023)

THESIS

- An Explainable Self-Supervised Learning Method For Kidney Disease Detection In CT Imaging With Vision Transformer ([Link](#))

ENGLISH PROFICIENCY

IELTS Academic

December 7, 2025

Overall Band: 7.5

Listening: 7.5 Reading: 8 Writing: 7.5 Speaking: 7

ACADEMIC ACHIEVEMENTS

- Technical Scholarship from University Grant Commission (UGC), awarded to top-performing students based on academic results of 2020, 2021, 2022, and 2023.
